Year: -2024 – 2025

Course: Nocode-Locode App Development

Course code: UNC 149

Semester Project

Group Number – 2

Team Members:

- **Sharanya (CU22BCOM015A)**
- **Sanath K (CU23BBA0047A)**
- **Vasani jeel Dinesh Bhai (24UG00241)**

Problem Statement

1. Background

University events and club activities are essential for student engagement, networking, and personal growth. However, many students struggle to stay updated, leading to missed opportunities.

2. Problem Description

There is no centralized platform where students can easily discover, register for, and get reminders about university events and club meetings. As a result, participation is low, and students often miss important activities. Additionally, clubs face challenges in managing memberships and communicating effectively with their members.

3. Impact of the Problem

Without a proper system, students remain unaware of opportunities to engage, while clubs struggle to organize events efficiently. This leads to lower student involvement, poor event turnout, and communication gaps between students and organizations.

4. Need for a Solution

A simple app can provide a centralized platform for event discovery, registration, and reminders. It would help students stay informed and engaged while giving clubs an easy way to manage activities and communicate with members effectively.
